[14ED15/25]

FIRST/SECOND SEMESTER B.Tech. EXAMINATION, JUNE-2017

ENGINEERING DRAWING

Time:3 Hours

Maximum Marks: 70

Instructions: Answer all the questions.

First the sketching in to be done and then the computer drawing is to be generated.

1. a. A point A is 40mm in front of VP and is situated in the fourth quadrant. Its shortest distance from the intersection of XY and X1Y1 is 45mm. Draw its projections. Also find its distance from HP. **10**

   b. A line AB has its end A 20mm above HP and 30mm in front of VP. The other end B is 60mm above HP and 45mm In front of VP. The distance between the end-projectors is 70mm. Draw the projection of line. Determine the True length. **10**

OR

1. A square Lamina ABCD of 40mm side rests on corner C such that the diagonal AC appears to be at 45° to VP. The two sides containing the corner C make equal inclination with HP. The surface of the lamina makes 30° with HP. Draw the top and front view. **20**

2. A Tetrahedron of 55mm side rests on one of its corner such that an edge containing that corner is inclined to HP at 50° and VP at 30°. Draw the projection. **30**

3. A Rectangular Prism of base 40mmX25mm and height 65mm rests on HP on its base with the longer side inclined at 30° to VP. It is cut by a plane inclined at 40° to HP, perpendicular to VP & bisects the axis. Draw the development of the remaining portion of the prism. **20**

OR

3. A Rectangular pyramid of base 40mmX25mm and height 50mm is placed centrally on a Rectangular slab of side 100mmX60mm and thickness 20mm. draw the isometric projection of the combination. **20**
