[14CS/IS34]

THIRD SEMESTER B.TECH EXAMINATION, DECEMBER - 2015

OBJECT ORIENTED PROGRAMMING WITH C++

Time:3 Hours **Maximum Marks:70**

Instruction: Answer any **FIVE** full Questions, choosing at least **TWO** from each part.

PART-A

1.	a.	Explain various features of object oriented programming.	08
	b.	Explain Cin and Cout with an example.	04
	c.	Explain setw Manipulator.	02
2.	a.	What is constructor? Explain copy constructor with an example.	06
	b.	What is class? Write a program to create class called employee which consists of name, designation, ecode and salary as a data members and read, write as a member function. Using this class to read and write 10 employee information.	08
3.	a.	Define array and array of objects. Explain declaration and Initialization of multidimensional array.	07
	b.	Explain Array of strings with an example.	07
4.	a.	With an example, explain the over loaded of pre-increment and post increment operators.	08
	b.	Write a C++ program to overload '+' operator to concatenate two strings.	06

PART -B

5.	a.	Define multiple inheritance. Explain ambiguity arises in multiple inheritance.	06
	b.	Explain overriding member functions with an example.	05
	c.	Explain three access specifiers.	03
6.	a.	What is virtual function and pure virtual function? Explain with an example for each.	08
	b.	What is friend function? Explain friend as bridges, with an example.	06
7.	a.	Define function templates. Write a C++ program to create a template class for stack and demonstrate stack operations on integer and character data types.	09
	b.	Explain the need for exception handling.	05
8.	a.	Explain and write a program count () algorithm in STL.	07
	b.	Explain and write a program merge () Algorithm in STL.	07
