FOURTH SEMESTER B.TECH EXAMINATION, JUNE – 2019

SURVEYING - II

Time: 3 Hours **Maximum Marks:70**

Instructions:

1. Answer any **FIVE** full Questions choosing at least any **TWO** full questions from each part.
2. Draw neat diagram wherever necessary.

PART - A

1.	a.	List and explain different types of curves with neat sketches.	08
	b.	Explain procedure for setting out the curve using Rankine's method.	06
2.	a.	What is meant by Electronic Distance Measurement? Discuss various types of EDM's.	07
	b.	Explain the concept of total station and list the applications of total station.	07
3.	a.	Define tachometric surveying. List three methods of tacheometric surveying and explain any two methods of tachometric surveying.	08
	b.	It was required to determine the distance between two points A and B by a tacheometer fitted with an anallactic lens.(K=100, C=0) with instrument at A and staff at B, the observations made were a vertical angle of + 9° 46' and staff intercept of 1.915 metres. What is the horizontal distance AB? Later on it was found that the constants of the instrument are 100 and 0.5. What would be the percentage error in the horizontal distance computed?	06
4.	a.	What is horizontal control? Explain any three reference methods employed.	08
	b.	What do you mean by well conditioned triangle? Explain.	06

PART - B

5.	a.	List and explain different Global Positioning System (GPS-Segments) segments.	07
	b.	Explain the absolute positioning and relative positioning methods for serving with GPS.	07
6.	a.	Explain differential GPS for surveying.	08
	b.	List any 12 applications of Global positioning system (GPS system).	06
7.	a.	Define Remote Sensing with a neat sketch and explain the elements involved in remote sensing system.	07
	b.	What is meant by Blackbody radiations? Explain Plank's Radiation law.	07
8.	a.	List out the components of GIS and explain the hardware components..	07
	b.	Explain the difference between vector and raster data used in GIS Technology.	07
