[17IS44]

FOURTH SEMESTER B.TECH EXAMINATION, JUNE – 2019

PROGRAMMING PARADIGMS

Time:3 Hours **Maximum Marks:70**

Instructions:

1. Answer any **FIVE** full questions.Choosing at least **TWO** questions from each part.
2. Any missing data may be suitably assumed.

PART-A

1.	**a.**	Explain the reasons for studying programming languages?	**07**
	b.	Why the Von-Neumann bottleneck is important? Explain with neat diagram.	**07**
2.	**a.**	What is lexical analyzer? Explain the three methods of building lexical analyzer.	**07**
	b.	Explain the structure of LR parser and give the advantages of LR parser.	**07**
3.	**a.**	Why do we need pointers and when do we say that pointer is dangling pointers? Explain different operators used in pointer operations.	**07**
	b.	What are variables? Explain different attributes of variables.	**07**
4.	**a.**	Define relational and Boolean expressions. Explain different operators used to represent relational and Boolean expressions.	**07**
	b.	What are guarded commands? Explain Dijktra's guarded command with flowchart.	**07**

PART-B

5.	**a.**	With neat diagram, explain different implementation models of parameter passing.	**07**
	b.	Describe the deep access method of implementing dynamic scoping.	**07**
6.	**a.**	Describe the fundamental types of abstraction. Describe stack as Abstract Data Type example.	**07**
	b.	What are parameterized Abstract Data Type? Explain with example.	**07**
7.	**a.**	Describe the features of object-orientation in C#.	**07**
	b.	What is run-time polymorphism? Give example.	**07**
8.	**a.**	Explain any two interprocess communication methods with diagram.	**07**
	b.	Write a java program to illustrate two threads execution.	**07**
