SIXTH SEMESTER B.Tech./B.E EXAMINATION, JUNE – 2016

REMOTE SENSING AND ITS APPLICATION

Time: 3 Hours **Maximum Marks: 70**

Instructions:

1. Answer any **FIVE** full Questions.
2. Missing data may be suitably assumed.

1.	a.	Explain the different parts of electro magnetic spectrum with their uses in satellite remote sensing.	07
	b.	Explain with neat sketch the energy matter interaction in the space and in the study area.	07
2.	a.	Write short noes on Active and Passive Remote sensing.	06
	b.	Briefly explain spatial resolution and radiometric resolution.	08
3.	a.	Explain the characteristics of IKONOS satellites.	07
	b.	Write a note on IRS series of satellites.	07
4.	a.	Explain the principle of determination of height of an object using relief displacement. Derive the equation to determine the height of an object using relief displacement with a neat sketch.	10
	b.	Define Fiducial marks and its uses in Aerial phtography.	04
5.	a.	List and explain the elements of image interpretation based on order and method of search.	12
	b.	Name the methods of Interpretation of data.	02
6.	a.	Define Image classification. Explain in detail supervised and unsupervised classification.	10
	b.	Name the broad categories of Image enhancement techniques.	04
7.	a.	Explain in detail the applications of Remote Sensing in generating different thematic maps in identification of Ground Water potential zones.	10
	b.	List the objectives of Land use/Land cover mapping.	04
8.	a.	Write short notes on: i. Proximity Analysis ii. Overlay Analysis	08
	b.	Define GIS. Explain the components of GIS.	06
